GCSU students work to improve health in Baldwin & surrounding Counties

As the 15th-century historian Thomas Fuller once said: “Health is not sickness, it is life itself.” This is something that Flannery O’Connor understood very well.

In 1954, Susan Lindsley moved on from high school and began her professional career. She went on to become one of the most successful public health majors in the history of Georgia College & State University.

“Health is not sickness, it is life itself,” Lindsley said.

When O’Connor first showed Lindsley the room where she worked, she noticed her desk didn’t have a window or the door to her room. “It didn’t matter because the room was small,” Lindsley said.

When Flannery told me to always face the wall, I didn’t matter because the room was small. I could see the wall and my reflection.”
